PROFESSIONAL SUMMARY

Detail-oriented Frontend Engineer and Computer Science undergraduate (4.47/5.0 CGPA) with 3+ years of experience building responsive, type-safe web applications. Proven track record at IFNOTGODTECH optimizing React/Next.js workflows, integrating complex REST APIs, and improving frontend performance by 15%. Highly proficient in TypeScript, advanced state management, and crafting intuitive, data-driven dashboards. Comfortable collaborating with backend engineers and consuming complex APIs.

SKILLS

Core Technologies: HTML5 | CSS3 | Tailwind CSS | JavaScript | TypeScript | React.js | Next.js | Redux | Zustand | TanStack

Database: MongoDB (NoSQL)

Familiar / Tools: Python | Flask | Django | Git | GitHub | Figma | Notion

EDUCATION

BSc Computer Science — Federal University of Technology, Owerri (FUTO) *Expected Graduation: 2027*
Current CGPA: 4.47 / 5.0

WORK EXPERIENCE

IFNOTGODTECH

Frontend Engineer

11/2024 – Present

Built and maintained responsive, performant interfaces across multiple applications using React.js and Next.js, integrating 15+ REST API endpoints.

- Travelmate Web:** Engineered core 'Airport Taxis' and 'Stays' booking engines using Next.js, implementing advanced search, filter, and caching strategies to deliver a seamless user reservation flow.
- Travelmate Dashboard:** Built a standalone companion application to centralize user data, engineering a 'Bookings Overview' feature that syncs real-time reservation history from the main web platform.
- Itestify Dashboard:** Designed and deployed a secure admin portal featuring real-time Donation Tracking, user analytics dashboards, and an automated 'Scriptures of the Day' Content Management System (CMS).
- Resolved complex TypeScript state management issues across both Travelmate applications, ensuring data consistency and reducing frontend response times by **15%**.

OPEN SOURCE CONTRIBUTIONS

[Drips](#) Open Source Contributor

Ongoing

Active contributor to Drips, an open-source decentralised funding protocol. Resolved 10+ issues across the production codebase, demonstrating the ability to navigate unfamiliar codebases, adhere to external project conventions, and ship fixes independently.

- Contributed bug fixes and frontend improvements across multiple issues, engaging with maintainer feedback and iterating to meet project standards.
- Consistently reviewed existing code architecture before proposing solutions, ensuring changes were minimal, targeted, and non-breaking.

PROJECTS

SchoolBoard *Frontend / Lead Developer*

07/2024 – 10/2024

Developed a multi-view web application (student and admin views) featuring a dedicated board for events and announcements.

- Implemented user authentication, profile management, and search/filter functionalities, ensuring a secure and personalised experience across all user types.
- Built the front-end with React.js, HTML5, and CSS3 for a responsive UI; paired with a scalable Django back-end and MongoDB database, developed using Agile methodology.

Simple English-Igbo Dictionary *Full-Stack Developer*

03/2024 – 05/2024

Built a web-based bilingual dictionary supporting English-to-Igbo and Igbo-to-English translation.

- Curated and pre-processed a dataset of English-Igbo translations sourced from Kaggle to build a comprehensive, accessible knowledge base.
- Engineered a responsive UI with HTML and CSS featuring an intuitive search bar; implemented core backend logic with Python and Flask to handle user queries and return accurate translation results.
